Work Experience

Full Stack Web Developer [May-August 2016] – Peloton Computer Ent. (Calgary, AB)

- Overhauled QA interface for greater usability, including option to request exclusion of individual files
- Added additional filters and columns to the Query Files page for dynamic data presentation
- Implemented QA checks to ensure data validity within the database
- Improved the efficiency by at least 100% of 40 QA File Queries by moving to back-end
- Developed a Report Generation function to display printable information in an industry-standard format
- Added proper pagination and more filters to the 3 additional query pages integral to the application
- Made extensive UI changes, including developing a Saved Query result display on the home page

[Technologies Used: Perl {Catalyst Framework, DBIx, TT2, Moose}, HTML, CSS, JS, jQuery, PostgreSQL, Git, Bootstrap, Emacs, SourceTree]

Side Projects

The 30 Day Spend [<https://the30dayspend.com/>]

A web app to prevent the impulse buying habits that plague consumer's minds and wallets in today's globalized economy.

[Technologies Used: Foundation, Firebase, JS, jQuery, HTML, CSS, Moment.js]

Become Titanic [<http://becometitanic.com/>]

My personal blog for advice on general self-mastery, a topic I am very passionate about. I use this blog primarily to improve other people's lives and eloquence in my writing.

[Technologies Used: Wordpress, Photoshop, Illustrator, Word]
